4ft Rectangular Banqueting Table (122cm)

SKU: FN-BQT-04R
Category: Tables, EventPro® Series, Banqueting Tables
Condition: New

£49.95 ex-VAT

Description

4ft Rectangular Banqueting Table (122cm)

A 122cm rectangular banqueting table with an 18mm plywood top and folding wishbone steel legs. The 4ft length seats up to four guests and fits into tighter venue spaces where full-size 6ft tables would crowd the room. At 76cm wide and 76cm tall, it matches the standard banqueting height used across the events industry. Like our other folding banqueting tables, it's also widely known as a trestle table.

The plywood top surface measures 18mm thick, bonded and sanded smooth. A black PVC edge strip runs the full perimeter, absorbing knocks during transport and setup without chipping or splintering. Underneath, reinforced timber battens span the width of the table, distributing weight across the surface and preventing flex under loaded centrepieces or catering equipment.

The wishbone steel legs fold flat against the underside of the table for storage and transport. A locking mechanism holds each leg in the open position, eliminating wobble during use. The folding action requires no tools. One person can set up or collapse the table in seconds.

Typical Uses

Event hire companies use the 4ft table as a registration desk, signing table, or display surface at weddings and corporate functions. Caterers position them as drinks stations or dessert displays. Training venues use them for small breakout groups of three or four delegates. The compact footprint makes them useful in corridors, foyers, and marquee entrances where floor space is limited.

You can run these tables in rows for narrow banquet-style dining, or scatter them as accent tables throughout a venue. They pair with the 6ft rectangular tables when you need a mix of table sizes for varied group configurations.

Storage and Transport

The folding legs bring the table down to a slim profile that stacks against walls or loads flat into a van. If you are buying in quantity for a hire fleet or venue inventory, the flat-fold design means you can store dozens in the footprint of a single wardrobe.

Surface Preparation

The plywood top is unfinished. Most users cover it with tablecloths for formal events. For casual use, the surface wipes clean with a damp cloth. The PVC edge protects the plywood from moisture ingress at the rim.

Buying in Bulk and Planning Stock

Buyers often add 50, 100, or 200 of these 4ft tables to support training rooms, polling stations, school exams, or venue overflow. The compact size gives you more options than a larger table when access routes feel tight. A team can line them up as exam desks, push them into pairs for small meetings, or break them out as signing points and

buffet support. For transport, you can flat stack more 4ft tables in one van bay than 6ft models, which helps crews that load mixed furniture, catering kit, and linen on the same run. Venue teams also value the lower stack height on table trolleys because staff can wheel stock through store room doors without lifting each table off by hand.

Room planners often use this size to solve awkward corners that would waste floor space with a longer table. In a 100 person room, you might place ten to twelve 4ft tables round the edge for registration, literature, tea points, and laptop check-in while larger dining tables take the centre. Education buyers use rows of single tables with at least 90cm between rows for invigilator access. Catering teams leave wider aisles, often 120cm or more, wherever servers carry trays or hot equipment. Fire exits need a clear path, so planners keep table ends back from exit doors and avoid narrowing the route with chair backs or storage stacks.

Pairing Suggestions and Venue Use

You can pair the 4ft rectangular table with folding chairs for staff briefings, with padded conference chairs for training days, or with Chiavari chairs for a compact top table at a wedding. Buyers also use it beside the 6ft rectangular and 5ft round banqueting tables when a room needs more than one table shape. A council chamber might use the 4ft size for sign in desks, then use 6ft tables for committee seating. NHS trusts use compact tables in vaccination clinics and assessment rooms. Universities place them in foyers for prospectus displays, badge printing, and course advice during open days.

Corporate venues use this table for reception desks, sponsor literature, and breakout groups of four. Caterers place two tables back to back to form a wider service island for tea urns, glassware, and condiments. Wedding teams often add one near the entrance for the guest book, cards, or order of service sheets. Festival organisers use them under gazebos for accreditation and radio issue points where crews need a full depth worktop without the length of a standard trestle.

Maintenance, Load Use, and Working Life

Staff keep these tables in good condition by lifting rather than dragging, storing them dry, and keeping the folded legs flush to the underside during stacking. Most wear starts at the corners and outer edge where crews clip door frames or drop tabletops onto concrete. A tablecloth hides cosmetic marks, but careful handling slows that wear. If you run a venue stock room, ask staff to place sheets or pads between tops on long stacks and to keep heavy flight cases away from the plywood face.

The dimensions matter in regular use. The 76cm width gives diners enough reach across shared platters without forcing staff to stretch, and the 76cm height matches standard banqueting and conference seating. When buyers load one side with crockery, laptops, ballot boxes, or floral work, they should still spread weight across the surface rather than crowd one corner. The timber battens and leg frame support normal commercial loads, yet good practice still counts. With routine cleaning, dry storage, and sensible handling, venues keep these tables in service for many seasons.

Top material: 18mm plywood with black PVC protective edge
Underside reinforcement: timber battens
Leg type: wishbone steel, folding, with locking mechanism
Dimensions: 122cm L x 76cm W x 76cm H
Seating capacity: up to 4 guests
Use: indoor
