EventPro® Series Tolix Style Steel Chair – Blue

SKU: TOLCHBLUE
Category: Chairs, Outdoor, EventPro® Series, Free Shipping, Tolix Style Chairs
Condition: New

£38.50 ex-VAT

Description

EventPro® Series Tolix Style Steel Chair – Blue

A heavy-duty powder-coated steel chair in blue, suitable for both indoor and outdoor use. Overall height: 84cm. Width: 46cm. Depth: 46cm. Stackable up to 10 high. The rain-resistant powder-coat finish handles British weather without rusting or degrading. The industrial silhouette and bold blue colour create visual interest at food festivals, corporate networking events, outdoor bars, and exhibition stands.

Indoor and Outdoor Use

The powder-coat finish seals the steel against moisture penetration. Rain beads off the surface. UV exposure does not degrade the coating. You can deploy these at outdoor venues through spring, summer, and autumn without protective covers or nightly storage. For winter use, bring them under cover or accept that extreme freeze-thaw cycles may in time stress the coating at joint points.

Indoors, the blue colour adds personality to cafe environments, co-working spaces, breakout areas, and casual dining setups. The industrial aesthetic works with exposed brick, polished concrete, and raw timber interiors.

Stacking

The chairs stack up to 10 high. Ten chairs in a single stack occupy the floor space of one chair. This density makes bulk storage practical even in limited warehouse space. The all-metal construction absorbs stacking impacts without cracking or deforming.

The Blue Colour

Blue brings a maritime, industrial character to outdoor spaces. It suits harbourside restaurants, rooftop bars, poolside dining, and coastal venues. For corporate use, blue aligns with technology, finance, and healthcare brand palettes. At festivals and markets, blue stands out from the sea of black and white furniture that dominates most event sites.

Mix blue with other Tolix colours (black, white, yellow, red) for a multi-colour scheme, or deploy in a full set for a coordinated look.

Part of the EventPro® range. Trusted by the BBC, ITV, Cambridge University, and used at the Commonwealth Games.

Buying in Bulk

If you are buying 50, 100, or 200 chairs, the ten high stack gives you real storage value. One stack holds ten chairs in one footprint, so terrace teams can clear a full dining area before the next weather front hits. Buyers fitting out beach bars, student unions, cafés, and council venues often order in blocks of 40 or 80 so each zone keeps

matching stock and a few spare units. The steel build handles bulk transport well, though crews should still use trolleys or felt strips if they want the finish to stay sharp.

You can pair blue Tolix style chairs with pale timber tops, white steel tables, black poseur frames, and rope barriers. Blue gives a site a stronger identity than black, yet it still sits well with neutral tables and branded backdrops. Technology firms, finance groups, NHS venues, and university teams often choose blue because it links with house colours without pushing the room into novelty.

Blue also sits well in council cafés, campus hubs, and healthcare gardens where buyers want colour without a harsh visual jump.

Layout Planning

You can seat four people around compact square tables, or run pairs and fours along long café benches and food hall tables. If you are planning a 100 seat room, count at least 60cm per diner and keep 1.2 metres for main aisles. Hold wider routes near exits, bars, and queue points. Event planners using blue chairs on terraces or stand spaces often group them in small islands so guests can talk without blocking the next table.

The ten high stack matters in practice because crews can move 100 chairs in ten stacks and clear the floor for cleaning or a room reset. The steel frame spreads guest weight through the seat pan and lower braces, so the chair feels firm when guests lean back or shift on uneven paving. Buyers who run mixed indoor and outdoor stock value that balance between low storage volume and hard use strength.

Care and Service Life

Staff can wipe the chair with warm water and mild detergent after service. Sweep grit from stack zones before crews pile chairs because grit marks the finish over time. If a site leaves the chairs outside through spring and summer, stock teams should check the feet and joint points during routine counts. Buyers who bring the chairs under cover for winter and keep them off rough concrete get long service from a colour stock line that still stands out in year three and beyond.

Material: heavy-duty powder-coated steel
Colour: blue
Overall height: 84cm
Width: 46cm
Depth: 46cm
Stackable: up to 10 high
Use: indoor and outdoor
Weather resistance: rain-resistant powder-coat finish
Part of the EventPro® range

Free courier delivery is included. Order this chair and we get it to your door at no extra cost, anywhere on the UK mainland.

Specifications

Dimensions: 50cm x 45cm x 132cm
Weight: 4.20 kg
