6ft Rectangular Banqueting Table (183cm)

SKU: FN-BQT-06R
Category: Tables, EventPro® Series, Banqueting Tables
Condition: New

£72.00 ex-VAT

Description

6ft Rectangular Banqueting Table (183cm)

A 183cm (6ft) rectangular banqueting table with an 18mm plywood top, folding steel legs, and a locking mechanism that holds the frame rigid during use. This is the standard workhorse table for banqueting, conferencing, and catering operations across the UK events industry — also commonly known as a trestle table.

The 18mm plywood top provides a flat, stable surface at 183cm long by 76cm wide. At 76cm tall, it matches standard dining height. The brown hammer powder-coated steel legs fold flat for transport and lock into position when deployed. One person can carry the table at 18–19kg and position it without assistance.

Capacity and Configuration

The 6ft rectangular seats up to six guests: two on each long side and one at each end. For conference-style layouts without end seating, four delegates sit with generous workspace for laptops, notepads, and water glasses. Wedding coordinators run them in long rows for traditional banquet dining. Corporate event teams arrange them in U-shapes, hollow squares, and herringbone patterns.

Caterers use the 6ft table as a prep surface, buffet station, or bar back. The flat plywood top supports chafing dishes, urns, and stacked crockery without flexing. The locking leg mechanism prevents the table from collapsing under heavy, uneven loads.

Construction

The plywood top resists warping under normal indoor conditions. The brown hammer powder-coat on the steel legs provides corrosion resistance and hides scuffs accumulated over hundreds of event cycles. The locking mechanism engages with a firm click and requires deliberate action to release, preventing accidental collapse during use or repositioning.

Storage

Folded flat, the table stores on edge against a wall or stacks flat on racking. The slim folded profile means a standard transit van accommodates 10–12 tables flat-stacked. For permanent venue storage, purpose-built trolleys hold up to 20 units on edge.

Buying in Bulk and Operational Planning

Many venues buy the 6ft rectangular in batches of 20, 50, or 100 because one table size can cover dining, conferencing, exams, buffet service, and back of house prep. That flexibility cuts the need to hold separate stocks for each job. A fleet buyer will often map van space and store room racking before placing a large order. Flat stacked 6ft tables take more length than 4ft models, so teams often use vertical trolleys to keep stock mobile and to reduce manual lifts. In mixed fleets, planners also count how many crews can handle the tables at pace during a same day room turn.

In a 100 person room, layout shifts with the event brief. For dining, sixteen or seventeen tables of six create a clear grid with access lanes for staff. For classroom training, twelve tables with two delegates per table often leave enough space for chairs, bags, and a front presentation area. Teams should keep at least 90cm on guest routes and more on service routes, then hold clear widths at fire exits and door swings. If a room has pillars or low ceiling points, the 6ft rectangle gives planners a clean line that they can break and restart with less waste than a full run of round tables.

Pairing Suggestions and Venue Types

This table pairs with padded conference chairs for seminars, folding chairs for exam halls, and Chiavari chairs for long wedding breakfast runs in marquees and barns. Buyers also pair it with 4ft rectangular tables to solve corners, servery ends, and narrow alcoves. Caterers add linen and skirting to turn the same table into a buffet line, drinks station, or dessert display. Universities use them for enrolment halls, graduation dining, and open day check in. Councils use them for consultation events, polling stations, and public meetings. Hospitality teams use them in press rooms, crew catering tents, and sponsor lounges.

If you need more depth for display work, you can place two tables back to back and cover them with one cloth. If you need a U shape for board meetings or training, this size gives each delegate enough elbow room without the wide gaps that smaller tables can create at the corners. Buyers who stock the EventPro® 3ft round often use that round table as an accent point near a run of 6ft rectangulars for cakes, flowers, or welcome drinks.

Maintenance, Structural Use, and Working Life

Staff keep these tables in service by opening the legs on level floors, lifting from the frame rather than the plywood edge, and storing stacks where moisture cannot sit under the top. Most commercial wear comes from edge knocks, rough stacking, and vans that let tables slide in transit. Pads between tops help, and so do straps on transport trolleys. If you use the table for catering kit, wipe spills fast and keep heat sources on stands rather than direct on the plywood.

The specifications matter in practice. The 18mm top and steel frame suit normal banquet loads, crockery stacks, and display work, but buyers still need to spread weight across the surface. When users place urns, AV kit, or ballot boxes at one end, they should balance that load with care. The locking frame keeps the legs open during service, which matters in rooms where staff brush table legs with shoes, trays, or cable runs. Teams that train staff and rotate stock can keep a 6ft fleet working across many event seasons.

Top material: 18mm plywood
Leg finish: brown hammer powder-coated steel with locking mechanism
Dimensions: 183cm L x 76cm W x 76cm H
Seating capacity: up to 6 guests
Use: indoor
