EventPro® Series Tolix Style Steel Chair – White

SKU: TOLCHWHITE
Category: Chairs, Outdoor, EventPro® Series, Free Shipping, Tolix Style Chairs
Condition: New

£38.50 ex-VAT

Description

EventPro® Series Tolix Style Steel Chair – White

A heavy-duty powder-coated steel chair in white, suitable for both indoor and outdoor use. Overall height: 84cm. Width: 46cm. Depth: 46cm. Stackable up to 10 high. The rain-resistant powder-coat finish handles outdoor exposure without rusting. White steel chairs present a clean, modern aesthetic that suits pop-up cafes, corporate receptions, gallery spaces, and contemporary wedding venues.

Indoor and Outdoor Use

The powder-coat finish seals the steel against moisture penetration. Rain beads off. The white pigment maintains brightness under normal UK UV exposure without yellowing in the first few seasons. Deploy outdoors at summer events, garden parties, rooftop bars, and pavement dining areas.

Indoors, white steel chairs suit modern minimalist venues, art galleries, showrooms, and corporate spaces with clean architectural lines. The industrial form in white creates an interesting tension: utilitarian shape, refined colour.

Stacking

The chairs stack up to 10 high. The all-metal construction absorbs stacking impacts without damage. White does show scuffs and handling marks faster than darker colours, so stack and handle with reasonable care to maintain the finish appearance.

The White Colour

White reflects light and maximises the sense of space. It suits venues where the architecture, food, or product on display should take visual priority over the furniture. Wedding venues, product launch spaces, pop-up retail environments, and gallery dining events all benefit from white seating that recedes into the background.

For outdoor cafes and restaurants, white chairs create a Mediterranean or Parisian street-cafe aesthetic that customers associate with leisure and quality. They photograph well on social media, generating organic promotion for hospitality venues.

Part of the EventPro® range. Trusted by the BBC, ITV, Cambridge University, and used at the Commonwealth Games.

Buying in Bulk

If you are buying 50, 100, or 200 chairs, the ten high stack gives you strong storage density without a large floor take. One stack holds ten chairs in one footprint, so terrace teams can clear a dining zone fast and keep spare stock in a small back room. Buyers fitting out cafés, wedding courtyards, gallery canteens, and hospital visitor spaces often order in blocks of 40 or 80 so each zone keeps matching stock and a few reserve units for peak

dates.

You can pair white Tolix style chairs with timber tops, white steel tables, black frame poseur tables, and soft planting. White gives the industrial shape a cleaner look than black or red. Under daylight the finish reads crisp and open. Under candle light or warm festoon light it takes on a softer tone that suits roof terraces, barns, and wedding bars.

Gallery teams and wedding planners choose white when they want flowers, crockery, and signage to carry the colour brief.

Layout Planning

You can seat four people around compact square tables, or use pairs and fours on long dining tables for food halls and launch events. If you are planning a 100 seat room, count at least 60cm per diner and keep 1.2 metres for main aisles. Leave wider routes at exits, bars, and queue points. Event planners who use white seating in guest facing rooms often keep spare chairs off floor until final numbers are fixed because the cleaner layout matters as much as the seat count.

The ten high stack helps on reset days because crews can move 100 chairs in ten stacks and free the floor for cleaning or a change of use. The steel frame spreads guest weight through the seat pan and lower braces, so the chair keeps a firm feel on decks, paving, and hard internal floors. Buyers who need weather resistance and a lighter visual line in one product tend to compare this finish with timber chairs, then choose steel for the lower upkeep.

Care and Service Life

White stock needs better discipline than black stock. Staff should wipe the seats before each service, sweep grit from stack zones, and keep stacks off dirty walls. Most marks lift with warm water and mild detergent. If a venue leaves the chairs outdoors through the season, stock teams should inspect the feet and joint points during counts and pull marked units for touch up. Buyers who bring the chairs under cover for winter get long service and a cleaner look in the next season.

Material: heavy-duty powder-coated steel
Colour: white
Overall height: 84cm
Width: 46cm
Depth: 46cm
Stackable: up to 10 high
Use: indoor and outdoor
Weather resistance: rain-resistant powder-coat finish
