EventPro® Series Tolix Style Steel Chair – Yellow

SKU: TOLCHYELLOW
Category: Chairs, Outdoor, EventPro® Series, Free Shipping, Tolix Style Chairs
Condition: New

£38.50 ex-VAT

Description

EventPro® Series Tolix Style Steel Chair – Yellow

A heavy-duty powder-coated steel chair in yellow, suitable for both indoor and outdoor use. Seat height: 45cm. Overall height: 85cm. Width: 45cm. Depth: 50cm. Stackable up to 10 high. The rain-resistant powder-coat finish handles outdoor deployment without rust. Yellow steel chairs bring bold accent colour to food festivals, urban markets, creative workspaces, and outdoor dining areas.

Indoor and Outdoor Use

The powder-coat finish seals the steel against moisture and UV. Rain runs off the surface without penetrating to the metal beneath. The yellow pigment maintains vibrancy under normal UK sun exposure. Deploy at outdoor street food events, beer gardens, market stalls, and pavement cafes through the season.

Indoors, yellow chairs energise breakout zones, canteen dining areas, co-working spaces, and children-friendly venues. The colour stimulates appetite and conversation, making it a practical choice for food-service environments.

Stacking

The chairs stack up to 10 high. The all-metal construction absorbs stacking impacts without cracking or deforming. Stack for off-season storage, between-event clearance, or end-of-day cafe closure.

The Yellow Colour

Yellow is the most visible colour in the range. It draws the eye from across a crowded festival site or market. Use yellow to mark a specific zone, attract foot traffic to your stall, or create a distinctive visual identity for your outdoor dining area. Street food traders and market vendors favour yellow because it signals energy, informality, and approachability.

For corporate events, yellow works as an accent colour in breakout zones and informal networking areas. It pairs with grey, black, and white for a controlled pop of brightness in otherwise neutral environments.

Part of the EventPro® range. Trusted by the BBC, ITV, Cambridge University, and used at the Commonwealth Games.

Buying in Bulk

If you are buying 50, 100, or 200 chairs, the ten high stack gives you strong storage density for a colour line that stands out on site. One stack holds ten chairs in one footprint, so café teams, festival bars, and student unions can clear a terrace fast and still keep spare stock near the door. Buyers who use yellow as a brand accent often order in blocks of 20 or 40 and mix them with black or white stock across the same venue. The steel build takes hard use

well, but crews should still use trolleys if they want the finish to stay sharp.

You can pair yellow Tolix style chairs with black tops, pale timber tables, white steel tables, and planting walls. Yellow catches low light and overcast skies in a way darker colours do not. That gives market traders and food hall operators a simple tool for drawing the eye to one zone. University cafés, council youth spaces, and creative studios use yellow when they want the room to feel open, social, and awake.

Layout Planning

You can seat four people around compact square tables, or use pairs and fours along long dining tables for canteens and food courts. If you are planning a 100 seat room, count at least 60cm per diner and keep 1.2 metres for main aisles. Leave wider routes near exits and queue lines. Event planners who use strong colour seating often break the room into smaller clusters so guests can see clear routes and staff can clear tables without pushing through tight gaps.

The ten high stack helps on set days because crews can move 100 chairs in ten stacks and free the floor for cleaning or replan work. The steel seat and lower braces spread guest weight through the frame, so the chair feels firm on paving, resin floors, and timber decks. Buyers who need furniture that works outside, stacks tight, and adds colour without fabric upkeep tend to keep this style on the shortlist.

Care and Service Life

Staff can wipe the chair with warm water and mild detergent after service. Sweep grit from stack zones before crews pile chairs because trapped grit marks the finish over time. If a venue leaves the chairs outdoors through the season, stock teams should check the feet and joint points during counts and pull chipped units for touch up. Buyers who store the chairs under cover in winter keep the colour brighter and get longer service from the stock line.

Material: heavy-duty powder-coated steel
Colour: yellow
Seat height: 45cm
Overall height: 85cm
Width: 45cm
Depth: 50cm
Stackable: up to 10 high
Use: indoor and outdoor
Weather resistance: rain-resistant powder-coat finish
Part of the EventPro® range

Free courier delivery is included. Order this chair and we get it to your door at no extra cost, anywhere on the UK mainland.
